Who We Are

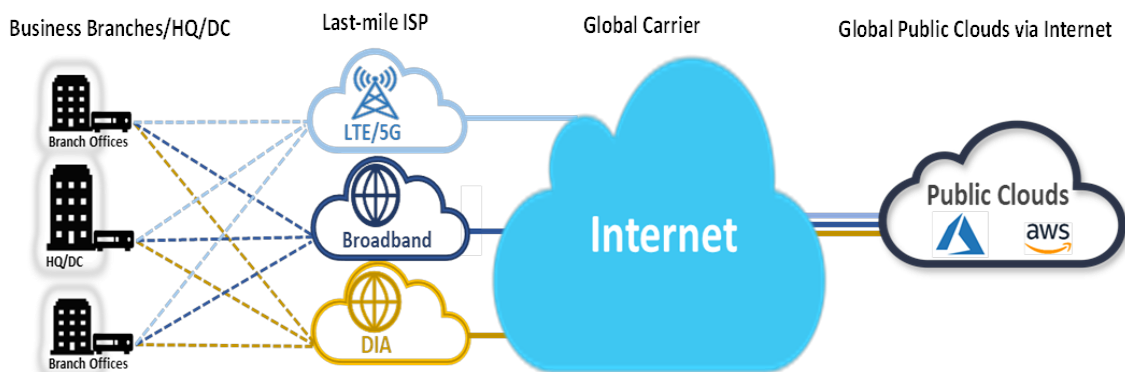

GBI is a global cloud, connectivity and content enabler that owns and operates a smart, fully managed service network. Our multilayer terrestrial and subsea cable meshed network bridges the East to the West through the Middle East, empowers businesses, connects societies and contributes to the region's transformation towards knowledge-based economies.

Run your infrastructure with GBI SD-WAN Services

The increased deployment of cloud applications for storage, voice/video, and other SaaS applications accelerated the enterprise WAN traffic's, resulting in challenges for IT departments to continue providing high - quality WAN easily adaptable to the new requirements.

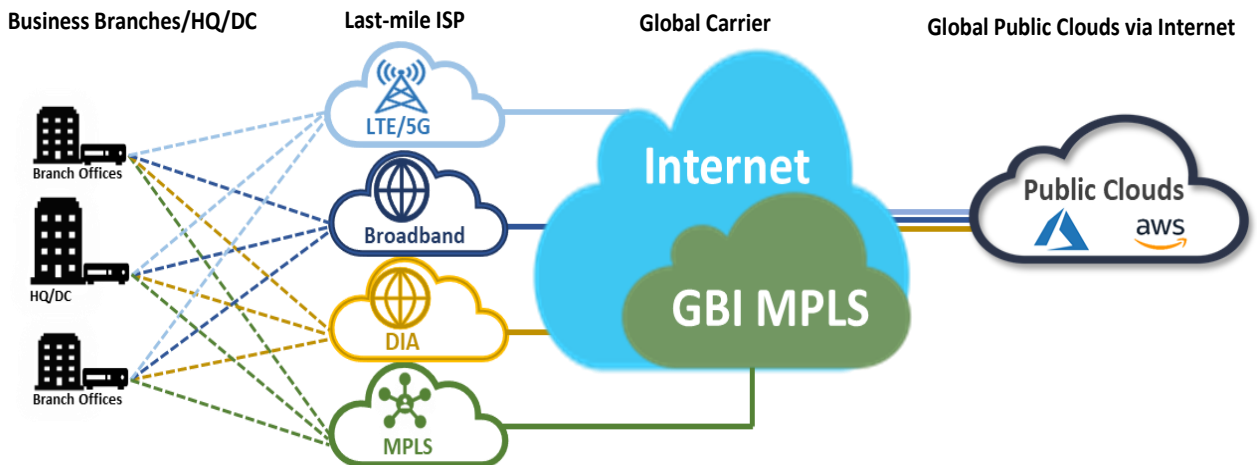

To succeed in a fast-moving market, businesses need faster, more secure connectivity, and better visibility and control of the applications going across their network.

EWAN Standard

- Interoperability with any type of internet access, suitable for customers who want to deploy SD-WAN over internet links
- Cost-effective option to deliver a scalable, agile and secure corporate WAN
- Basic connectivity with a single VPN instance
- Configure Layer 3 or Layer 2 VPN's
- High Availability/Load Balancing through multiple links
- Complete network and application visibility
- Application awareness routing and QOS policy making
- AWS and Azure breakout (add-on)
- Local internet breakout
- Full-fledged security including NGFW and UTM functions (optional)

EWAN Premium

- Combination of global MPLS VPN and any type of internet access
- Committed SLA by using dedicated access
- Unlimited VPN instances for business needs
- Consistent application performance over the public Internet access link
- Bypass the public Internet using our distributed global network gateways
- Bandwidth options: 1Mbps to 1Gbps
- All the other benefits of the GBI EWAN Standard Services

Solution Features and Benefits

Network Agility and Flexibility

GBI SD-WAN services allow quick adaptation to the enterprises' changing needs, including adding new cloud-based services and setting up new branches or remote offices.

Centralized Management & Control

Customers can make an informed decision in real-time through detailed application management, visibility, analytics, and control. A centrally located orchestrator monitors all network activity, alerts problems, and enables remote remediation of issues. The orchestrator allows for the automatic push of configurations to each network node and added accessibility to common software platforms to every location quickly and efficiently.

Optimized Cost

Seamlessly integrating any type of internet access (DIA, LTE, and broadband) alongside MPLS.

These options are often higher in bandwidth than MPLS and significantly lower the total cost.

Ease of Deployment

Speaking of speed, one of the key benefits of GBI SD-WAN services is that it makes deploying WAN services fast and simple. SD-WAN solutions are straightforward to deploy an automated setup and traffic monitoring, making them easy to manage.

If new branch offices are being opened, deploying the branch network with a GBI SD-WAN is as simple as shipping a low-cost appliance, plugging it in, and zero-touch configuring it through central management. GBI makes it easy for you to move quickly with all your IT requirements.

Security

To protect against the growing threat landscape, GBI SD-WAN services can be selected with fully built-in broad set of security features, such as next-generation firewall (NGFW), secure remote access, and unified threat management (UTM) services that protects application and user activity across the enterprise WAN, branch, and private/ public clouds.

Fully Managed

Receive relevant, timely information and access to round the clock control and management of your service.

- 24/7 Global NOC
- End-to-end service management
